Nowhere is this more apparent than Japan, a nation with an architectural tradition like no other. Long before screws and metal fastenings became de rigueur, Japanese builders had mastered the art of wood joinery. Using techniques handed down in guilds and families for centuries, Japanese builders would fit wooden beams together without any external fasteners. Buildings would stand for generations, held together with nothing more than tension and friction.

Over time, these traditional building practices mostly fell out of ordinary use, although they continu
Traditional Japanese carpentry, whether used to build a dinner table or the entire house containing it, doesn’t use screws, nails, adhesives, or any other kind of non-wooden fastener. So how do its constructions hold together? How have all those thousands of wooden houses, tables, and countless other objects and structures stood up for dozens and even hundreds of years, and so solidly at that? The secret lies in the art of joinery and its elaborate cutting techniques refined, since its origin in the seventh century, through generations and generations of steadily increasing mastery albeit by Since the 12th Century, Japanese artisans have been employing a construction technique that uses just one simple material: wood. Rather than utilize glue, nails, and other fasteners, the traditional art of Japanese wood joinery notches slabs of timber so that the grooves lock together and form a sturdy structure.

Yamanashi-based carpenter Dylan Iwakuni demonstrates this process in the endlessly satisfying video above, which depicts multiple styles of the angular joints and how they’re slotted together with the tap of a mallet. As Iwakuni notes at the end, new joineries often are used in tradit The art of Japanese joinery. Item Preview. Renewable every hour, pending availability.More info. Log In and Borrow. Purchase.
