Optical computing devices have the potential to build the very next computing infrastructure. Given the frequency limitations and cross-talk phenomena, as well as the soft-errors, of electronic devices on one hand, and the natural parallelism of optical computing devices, as well as the advances in fiber optics and optical switches, on the other hand, optical computing is becoming increasingly marketable. OCS, the International Workshop on Optical SuperComputing, is a new annual forum for research presentations on all facets of optical computing for solving hard computation tasks. This volume contains eight contributions selected by the program committee and two invited papers. Intelligent Computing book. Read reviews from world's largest community for readers.
