The monographs place outdated botanical nomenclature in the synonyms category, based on the International Rules of Nomenclature. For example, Aloe barbadensis Mill. is actually Aloe vera (L.) Burm. Cassia acutifolia Delile and Cassia angustifolia Vahl., often treated in separate monographs, are now believed to be the same species, Cassia senna L. Matricaria chamomilla L., M. recutita L., and M. suaveolens L. have been used for many years as the botanical name for camomile. However, it is now agreed that the name Chamomilla recutita (L.) Rauschert is the legitimate name. The vernacular names list.

**INTRODUCTION**

Antibiotic resistance has increased rapidly during the last decade, creating a serious threat to the treatment of infectious diseases. Drug resistance is one of the most serious global threats to the treatment of infectious diseases (1,2). In addition to resulting in significant increases in costs and toxicity of newer drugs, antibiotic resistance is eroding our therapeutic armamentarium. Since they are resistant to many antibiotics, therapeutic options have become limited. Therefore, alternative methods of treatment are sought after. For over several years medicinal plants have served as the models for many clinically proven drugs, and are now being reassessed as antimicrobial agents. Herbal antibiotics have been used throughout the centuries as natural treatments for hundreds of years.
