A thorough understanding of different areas of grammar is a fundamental need. The structure of my course paper can be characterized by the aspects below. The rule helps the learner to understand and to assimilate the structural meaning of the elements. It ensures a conscious approach to learning. The teacher thinks of the ways to overcome these difficulties: how to convey the meaning of the grammar item either through situations or with the help of the mother tongue; what rule should be used; what exercises should be done; their types and number. Then he thinks of the sequence in which pupils should work to overcome these difficulties, i.e., from observation and comprehension through conscious imitation to usage in conversation (communicative exercises). Difficulties are often an unavoidable but important part of the learning process. This seems particularly so for complex conceptual learning. We will explore the difficulties in attempting to understand and account for the struggles students experience while learning a particular emphasis on what happens when students experience difficulties and become confused. Running into problems while learning is often accompanied by an emotional response. Without a teacher present and without any automated support, it is possible that a student may succumb to their confusion, get frustrated and, as a result, disengage entirely (D'Mello and Graesser, 2014). A teacher cannot expect to teach an idea in September and, without referring to it again, have the students remember it in June. The three schools of learning There are three schools of psychology that have contributed to learning theory. Each looks at learning from a different point of view; they supplement rather than contradict each other and often overlap in practice. The cognitivist school looks at the thinking processes involved when we learn. The behaviourist school ignores these, and looks at how teacher behaviour and other external factors influence learning. It is built upon her existing understanding and experience of cutting up cakes, sharing out bricks and so on. She is not remembering her teacher’s concept of division, she is creating her own.
